Introducing our latest clinically validated probiotic supplement: Intestinal Biotic Support

As you know, each probiotic strain has its own unique effect on the human body. This is especially true for our new Intestinal Biotic Support, which is a clinically tested combination of three probiotic strains that demonstrate adhesion and colonization in the gut, as well as an ability to support normal intestinal function and comfort.* They have demonstrated their ability to relieve occasional bowel discomfort and promote overall gut well-being.* These strains have also been shown to support intestinal regularity and may also help to alleviate emotional stress associated with typical intestinal discomfort.*

Bioactive Compounds

3 well established probiotic strains: 100 mg or 3 Billion CFU Floradapt™ GI Intensive 1:1:1 Blend

Pediococcus acidilactici CECT7484 KABP™-021

Lactobacillus plantarum CECT7485 KABP™-022

Lactobacillus plantarum CECT7483 KABP™-023

Other ingredients: Microcrystalline Cellulose, Hypromellose (cellulose capsule), Corn Starch (non-GMO) and Silicon Dioxide

These strains of human origin have demonstrated their ability to survive gut passage and adhere to intestinal mucus *in vitro*. Moreover, when combined, the three strains produce significant amounts of butyric, propionic, and acetic acids in a ratio similar to that found in the healthy gut, and support a healthy GI immune response. They also help to regulate transit in two different animal models of gut immune hyperreactivity.^{1*}

Clinically Validated

Five clinical studies in individuals with functional GI discomfort, including some with lactose or fructose intolerance demonstrated:

Significant **reduction** in occasional **abdominal pain** ($p = 0.045$) and **flatulence** ($p = 0.004$) vs. placebo^{2*}

Significant **decrease in bloating** ($p = 0.0001$) and associated abdominal pain ($p = 0.0002$) vs. baseline^{3*}

Significant **improvement** in **QoL****, occasional abdominal pain ($p < 0.05$), **stool consistency** ($p < 0.001$) vs. baseline.^{4*}

Significant **improvement** in QoL** ($p = 0.023$) and occasional **gut-related stress** ($p < 0.05$) vs. placebo^{1*}

At Protocol For Life Balance®, we believe that offering the best possible ingredients gives practitioners the ability to recommend products that are both innovative and effective. Our **Intestinal Biotic Support** is a blend of three clinically validated probiotic strains. We developed this product to give practitioners a tool for patients with functional digestive issues seeking a probiotic blend with demonstrated symptomatic results.* Protocol For Life Balance® **Intestinal Biotic Support** the ideal supplement for your patients in need of a simple, broad-spectrum digestive support supplement.*
