

We're bringing AHCC® back!

For those of you who have been following our brand for a while, you know that we used to carry AHCC® capsules that we had to discontinue for reasons beyond our control. We are now able to bring this very popular product back, and we will be launching two new forms: a pure powder and vegetable capsules with added beta-glucans.

Bioactive Compounds

Shiitake mushroom mycelia extract:

- Obtained from the cultivation and enzymatic modification of the mycelia of *Lentinula edodes*
- 74% low molecular weight oligosaccharides (including 20–30% α -1,4 hexose) + polysaccharides (including β -1,3 glucans) + small amounts of naturally occurring protein, amino acids, lipids, and minerals

Bioavailable Compounds

Average molecular weight of 5,000 Da, with the lower molecular weight α -glucans having much better absorption than larger β -glucans

Clinically Validated

- > 100 universities and research facilities worldwide have conducted research on AHCC®
- > 150 academic papers have been published including more than 30 clinical studies

AHCC® has broad effects on the immune system*:

- Modulates the number and function of NK- and T-cells*
- Modulates the function of monocytes, macrophages, and dendritic cells*
- Promotes T-cell function*

At Protocol For Life Balance®, we believe that offering the best possible ingredients gives practitioners the ability to recommend products that are both innovative and effective. AHCC® is a unique standardized extract that has been clinically evaluated for its ability to support immune function.* We developed two different products: one in pure powder form and one in vegetable capsule form. We included β -glucans in our capsules for added support.* Protocol For Life Balance® AHCC® is therefore the ideal supplement for your patients in need of a simple, broad-spectrum immune support supplement available in pure powder to add to drinks and smoothies or in vegetable capsules.*
